Dan's **broad real estate experience and scientific mindset** give him a unique ability to develop **bespoke strategic advice, backed up by rigorous data analysis.**

Dan has over fifteen years of experience analysing the built environment, specialising in sustainable development and complex numerical assessment. His knowledge places him at the forefront of European, national and regional sustainability legislation and related assessment techniques. He has an eye on the future and is constantly searching for new ideas to improve the built environment and the world we live in.

Dan has worked collaboratively across the property industry to co-ordinate innovative strategies to futureproof development for a wide range of clients. He is of the view that development should deliver a lasting legacy for people and the planet, considering the scale, sector and location of projects.

Dan's analysis has been conducted on a diverse selection of projects; from high rise commercial towers in the City, to mixed use masterplans and private residential properties in south-east London, reflecting the broad make-up of Iceni's projects.

He has also provided strategic sustainability advice to assist property developers deliver on environmental, social and governance objectives.

Outside work, Dan can usually be found on two wheels, cycling the North Downs of Kent and Surrey. He also enjoys a spot of running and gardening.
